

HBS-500

Hotspot Billing System – AAA Radius Control – Traffic Control

Product Overview

HBS-500 is an all-in-one product specially designed for Hotspot and SMB (small & medium business) environment. It integrates “access control” and “traffic control” into one system to fulfill the needs in Hotspot. HBS-500 incorporates “convenience”, “efficiency”, “friendly” and other useful characteristics for services. No matter to deploy it in a restaurant, airport VIP lounge or coffee shop, business service center, conference room environment, HBS-500 can immediately achieve compatibility with the current network configurations, making it the ideal choice.

Key Features

AAA RADIUS Control:

The HBS-500 is an authentication, authorization, and Accounting based system, with additional configurations for External RADIUS authentication.

Accounting and Billing

The HBS-500 provides built-in billing profiles and billing report on screen for on-demand account.

Firewall Security System

The HBS-500 also supports other networking features such as a packet filtering firewall and Quality of service.

Load Balance / QoS

The HBS-500 also supports Traffic control, QoS management.

Content Filtering

The HBS-500 provides web content filtering and Internet content blocking, as P2P/ IM blocking.

Software Specifications

Networking

1. PPPoE, DHCP, Fixed IP mode support for WAN interface
2. DHCP, Fixed IP support for LAN clients
3. NAT and Transparent mode for all interfaces
4. Unrestricted number of clients (Full range of IPv4)
5. Fully configurable IP ranges: DHCP (Fixed by MAC or Dynamic), PPPoE
6. Dynamic DNS Support
7. DHCP RELAY

•Firewall Security

1. Packet filtering
2. Denial of service (DoS) protection
3. Virtual server management
4. TCP and UDP session control
5. Quality of service
6. Traffic control
7. Highly configurable connection based security policy
8. Real time alerting and logging of malicious attacks and scans
9. Web URL Filter
10. Web Content Filter
11. Application Filter (Bit Torrent, MSN Messenger, etc.)
12. Detailed log analysis via GUI

AAA RADIUS Control

1. Authentication, Authorization, Accounting control
2. Supports up to 500 concurrent users
3. Supports up to 2500 local accounts
4. Supports 2000 on-demand accounts
5. Simultaneous support for multiple authentication methods (Local and on-demand accounts, RADIUS)
6. Role-based and policy-based access control (per-role assignments based on Firewall Policies, Routing, Login Schedule, Bandwidth, Quota, and Session time)
7. User Session Management:
 - (1) SSL protected login portal page
 - (2) Supports multiple logins with one single account
 - (3) Session idle timer
 - (4) Session/account expiration control
 - (5) Friendly notification email to provide a quick hyperlink to login portal page
 - (6) Windows domain single sign on
 - (7) Configurable login time frame

Accounting and Billing

1. Provides built-in billing profiles for on-demand accounts
2. Enable session expiration control for on-demand accounts by time and data volume
3. Provides billing report on screen for on-demand accounts
4. Detailed per-user traffic history based on time and data volume for both local and on-demand accounts
5. Provides traffic history report in an automatic email to administrator

Management

1. Friendly Web Based GUI
2. Automatic Time Synchronization
3. Online firmware update
4. Remote logging
5. Searchable Logs
6. Customizable Logging System (Firewall, DoS, Login)

High Availability

1. Dual WAN auto failover
2. Dual WAN load balance
